

Putting Electoral Competition Where It Belongs

Comparing Vote-Based Measures of Electoral Competition

Aiko Wagner & Werner Krause

11/25/2020

Session and Variable Information

sessionInfo()

R version 4.0.2 (2020-06-22)

Platform: x86_64-apple-darwin19.5.0 (64-bit)

Running under: macOS Catalina 10.15.6

attached base packages:

[1] stats graphics grDevices utils datasets methods base

other attached packages:

[1] xtable_1.8-4 ggplot2_3.3.0 magrittr_1.5 dplyr_1.0.2

Variable Description

Core Data (pecwib_wagner_krause.Rdata)

Country: Country Name

wave_year: Wave of European Election Study (EES)

vol_ess: Volatility based on EES

agg_switch: Share of Respondents Switching Vote Choice

agg_avail: Mean Availability of Respondents

diff: Time Difference between Survey and Last National Election (in years)

diff2: Squared Time Difference between Survey and Last National Election (in years)

agg_avail_median: Median Availability of Voters

agg_avail_nv: Mean Availability without Non-Voters

agg_switch_nv: Share of Respondents Switching Vote Choice without Non-Voters

CSES Data (pecwib_cses_wagner_krause.Rdata)

country: Country Name

year: Year of Survey/Election

agg_switch: Share of Respondents Switching Vote Choice

agg_avail: Mean Availability of Respondents

Article: Tables and Figures
